

Adding to the Trusted Zone

First open up ZoneAlarm and go to the Zone tab like this

The screenshot shows the ZoneAlarm Pro with Web Filtering interface. The main window title is "ZoneAlarm Pro with Web Filtering". The interface includes a status bar at the top with "INTERNET IN OUT" indicators, a "STOP" button, and "PROGRAMS" status. The "ZONES" tab is selected, showing a table of network entries.

Firewall

Use this tab to add computers and networks to your Trusted or Blocked Zone.

Overview

Firewall Example: Put a computer or network you want to share with into the Trusted Zone.

Program Control Example: Put a computer that repeatedly 'pings' you into the Blocked Zone.

Alerts & Logs

Privacy All traffic sources not listed here are in the Internet Zone by default. Networks are automatically added to this list.

E-mail Protection

Web Filtering

ID Lock

| Name | IP Address / Site | Entry Type | Zone ▲ |
|-------------|-------------------|------------|---------|
| New Network | 111.111.111.111 | Network | Trusted |

Entry Detail

| | |
|-------------------|-------------------------------|
| Name | New Network |
| Zone | Trusted |
| Entry Type | Network |
| IP Address / Site | 111.111.111.111/255.255.255.0 |

Buttons: Add >>, Remove, Edit, Apply

Now click on the Add button in the lower right hand corner

And you get this popup where you select what kind of item you want to add

On all the examples before the names can be whatever you want them to be, but should be something that is easily identifiable.

If you have something like `www.zonealarm.com` that you want to add, then select the Host/Site selection

And then you enter the information in like this and then click the lookup button to get the IP address

A screenshot of a Windows-style dialog box titled "Add Host/Site". The dialog has a blue title bar with a close button (X) in the top right corner. Inside the dialog, there is a section with the title "Add" and a description: "Add a Web host/site to your Trusted or Blocked Zone by completing the fields below. Name the Web host/site for easy reference later so you always know who you're trusting and who you're not." Below the description are four input fields: "Zone" (a dropdown menu currently showing "Trusted"), "Host name" (a text box containing "www.zonealarm.com"), "Description" (a text box containing "ZoneAlarm"), and an empty text box. To the left of the empty text box is a "Lookup" button. At the bottom of the dialog are "OK" and "Cancel" buttons.

If you have an IP address like `111.111.111.111` Then select IP Address

And then enter in the information like this

Add IP Address

Add

Add an IP address to your Trusted or Blocked Zone by completing the fields below. Name the IP address for easy reference later so you always know who you're trusting and who you're not.

Zone: Trusted

IP Address: 111.111.111.111

Description: Home IP

OK Cancel

If you have a Range like 111.111.111.111 - 333.333.333.333 then you want to select the IP range
And then enter the information in like this

Add IP Range

Add

Add an IP range to your Trusted or Blocked Zone by completing the fields below. Name the IP range for easy reference later so you always know who you're trusting and who you're not.

Zone: Trusted

IP Address: 111.111.111.111

IP Address: 333.333.333.333

Description: Home on the Range

OK Cancel

But I have been told that adding a range in the Class C subnet doesn't work.
Like this, 10.10.10.1 - 10.10.10.10 would work, but 10.10.1.1 - 10.10.10.10 will not.

The Class C subnet range is 10.0.0.0 - 10.255.255.255

And if you have this kind of address 111.111.111.111/255.255.255.255 then you want to select Subnet
And enter in the information like this

Add Subnet

Add

Add a subnet to your Trusted or Blocked Zone by completing the fields below. Name the subnet for easy reference later so you always know who you're trusting and who you're not.

Zone: Trusted

IP Address: 111.111.111.111

Subnet Mask: 255.255.255.255

Description: Subdivision subnet

OK Cancel

Once you have entered in all the information in the form then you click OK.
Once you are done entering in trusted zone information then you click apply.

Adding to the Blocked Zone

You go through the same steps as outlined above, except that you select blocked from the drop down menu where trusted is.
